

Name EME Group

Where 225 Little Page Street, Middle Park

Director Luke Middleton

Business message EME Group (ecologically motivated environments) is an architectural design firm. Our collaborative studio was established by Luke Middleton formerly design director of Brearley Middleton Pty Ltd.

EME group's design experience ranges from large scale urban design projects, undertaken both locally and internationally, exceptional residential architecture and innovative water saving systems. EME group empokys a design process that celebrates the unique opportunities found in each site and with each client. Specific attention is placed on the potential for ecological and socially sustainable principles.

Energy EME group's main energy consumption is in the areas of office equipment and lighting. It is suggested that EME group switch from their current tube fluorescents to quad-phosphor tubes which have greater light output. This will allow them to remove half of the tubes, saving money on lighting costs and greatly reducing their greenhouse gas emissions. With regards to office equipment EME group are diligent about turning equipment off and making use of power saving modes when appropriate. EME could also adjust their thermostats on the central heating device. For every degree over 18°C for heating, costs and greenhouse gas emissions will rise by up to 20%.

Transport: Most staff live locally and either walk or ride to work which is great! To offset any vehicle greenhouse gas emissions, EME group could consider joining the Greenfleet program. For a tax deductible donation Greenfleet will plant trees on your behalf in areas of need. See www.greenfleet.com.au
