

Name	The Pink Room	
Where	359 Bay St, Port Melbourne Ph: 9645 1271	
Proprietor	Lisa and Sarah	
Energy	Lighting is the big energy user at the Pink Room. Savings can be made equivalent to taking 1 car off the road per year. This can be achieved by replacing most of the regular incandescent light bulbs with compact fluorescent lamps which last eight times longer and use at least a quarter of the energy. Heating practices at The Pink Room are great. A conscious effort is made to keep the door closed and to turn the heater off once the store reaches a pleasant temperature for customers and staff.	
Rubbish and recycling	The Pink Room practices good waste management. Cardboard, glass and plastics are recycled minimising what goes out in the general waste stream.	
Transport	Living above the store reduces the transport emissions enormously. As the car is used occasionally for work purposes Lisa and Sarah may consider joining the Greenfleet program (www.Greenfleet.com.au) to offset the greenhouse gas emissions created, by having trees planted in areas of environmental degradation.
