## Development highlights

Energy efficient development that meets section J requirements

Energy efficient dwellings that exceed the 6 star energy rating average

Energy and water efficient heating and cooling

Energy efficient hot water heat pump systems

Energy and water efficient appliances

Onsite water use and infiltration - Best Practice Stormwater treatment

Potable (drinking) water savings – 9,000L Rainwater tank connected to toilet flushing

Potable (drinking) water efficient fixtures

Renewable energy 16kW PV Panels

Improved indoor air quality due to reduced use of off-gassing materials

All dwellings have cross ventilation

Communal meeting spaces

Environmentally friendly materials choices

EV charging proposed

Undercover bicycle parking spots

Separate waste stream and recycling facilities

Icons copyright LID Consulting

## Executive summary

### Project summary

This report addresses the environmentally sustainable development requirements under Clauses 15.02 and 22.12 of the City of Port Phillip Planning Scheme, demonstrating best practice energy performance, water efficiency, indoor environment quality, stormwater management, sustainable transport, waste management and urban ecology.

The proposal seeks an amendment to Planning Permit 1051/2017/A. This amendment makes minor built form changes, whilst also proposing a Residential Hotel use on Levels 1 – 9 of the approved building. This report seeks to address the proposed changes to the approval.

This sustainability report details measures that meet and often exceed mandatory Environmentally Sustainable Design (ESD) requirements for this type of development.

The body of the report contains a full list of ESD initiatives to be included in the development. A summary of the major ESD initiatives committed to are included below:

- Net Zero carbon / carbon neutral capability
  - The development will be future proofed and built to enable near net zero carbon emissions capability in operation. No gas connection to residential and hotel components of the building. Gas will likely be utilised by the commercial kitchen tenancy in future.
- Energy
  - Energy efficient dwellings that meet 6.6 star requirement as per existing permit
  - 10% increase on required NCC2019 insulation levels for floor and roof elements
  - Energy efficient reverse cycle air-conditioning heating and cooling systems beyond minimum standards (within one star of best available)
  - Energy efficient electric heat pump storage hot water units
  - Renewable energy Photovoltaic (PV) Panels of approx. 16kW to supply power to the development
- Water and Stormwater
  - On-site water uses and infiltration measures to meet CSIRO Best Practice Stormwater Management (Water Sensitive Urban Design) treatment quality requirements
  - Rainwater tank(s) of size 9,000L connected to all toilets on the ground and first floor to reduce potable water consumption and assist with stormwater quality management requirements
  - Potable (drinking) water saving measures including low flow toilets and taps
- Indoor Environment Quality (IEQ) – buildings that help keep occupants healthy
  - Reduced indoor pollutants from the use of low off-gassing materials such as low VOC paints, carpets and adhesives, and low formaldehyde products
- Sustainable materials
  - Avoidance of the use of endangered rainforest timbers in this development
  - Use of more environmentally friendly material alternatives for concrete, asphalt, insulation and other building component
- Sustainable transport
  - The development design encourages cycling as it includes substantial, readily accessible bicycle parking.

- Provision will be included at the carpark for a minimum of 6 x 30-32Amp power points to be installed to facilitate charging of electric vehicles.
- Urban ecology
  - Light -medium coloured roofing to help mitigate the effects of the Urban Heat Island effect

Generally, other non-mandatory guidelines and good design principles (e.g., Green Star) have also been incorporated where deemed to be relevant in respect to the scope and nature of this development. This encourages further levels of sustainability above and beyond the mandatory requirements.

The proposed development advances basic sustainability principles by increasing the potential use of the site, in line with the surrounding environment. In the context of rising development costs and a need to limit use of material, energy and land resources, the proposed development enables a more affordable and energy efficient model of construction. The expected design life of this development would be in excess of 40 years.

Guidelines and tools addressed in this report as relevant to sustainability include:

- National Construction Code (NCC) / Building Code of Australia (BCA) Volume One Section J;
- Victorian Planning Policy (VPP) and Local Planning Policy (LPP) clauses including
  - 11 Settlement
  - 12 Environmental and Landscape Values
  - 15 Built Environment and Heritage
  - 15.02 Sustainable Development
  - 18 Transport
  - 19.01-2R Renewable Energy – Metropolitan Melbourne
  - 22.12 Stormwater Management
  - 22.13 Environmentally Sustainable Development
  - 53.18 Stormwater Management in Urban Development
- Built Environment Sustainability Scorecard (BESS); and
- The STORM assessment.

The proposed development will address the relevant ESD requirements of the above planning scheme provisions.

**CITY OF PORT PHILLIP  
PORT PHILLIP PLANNING SCHEME**

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

## Results summary

Further to the above initiatives and in conjunction with others listed in this report, the development was assessed using the 'Built Environment Sustainability Scorecard' (BESS), obtaining a total score of **52%**. A score of 50% or greater (including compliance under energy, indoor environment quality, water and stormwater categories) demonstrates a Best Practice environmentally sustainable development. Note- A mandatory IEQ section 1.4 Daylight access for non-residential spaces credit was not achieved in the IEQ category (see IEQ section of this report for more detail). However due the use of the space, daylight is not required for the hotel.

## Commitment & documentation on plans

Where possible the "ESD initiatives" in each section **should be included on the plans**. Examples include (where relevant):

- water tank size(s) and location
- the openable component of a window
- air-conditioning indoor and outdoor units
- hot water system location and type
- solar panels
- bicycle racks (including in garages)
- external materials
- car park CO sensor
- Electric Vehicle (EV) charging station connection points
- other relevant readily shown items.

Where items are not usually shown on town planning plans, these can be included on a notes box on the drawings to ensure they flow through to construction drawings, or included in the specification.

**As a minimum this ESD report must be referenced** in a single note, such as:

"Plans are to be read in conjunction with the endorsed ESD report (which forms part of the town planning permit submission), and all initiatives contained within must be implemented to the satisfaction of the responsible authority"

Abbreviations used in this report include:

- BCA – Building Code of Australia
- SDAPP – Council Sustainable Design Assessment in the Planning Process
- BESS – Built Environment Sustainability Scorecard
- BADS – Better Apartment Design Standards (Victorian Planning Provision Clause 55.07 and Clause 58)

# 1 Net zero carbon emissions - Carbon neutral energy capability

## Goals

- To encourage development that minimises greenhouse gas emissions (cl15.02-1S)

Minimising greenhouse gas emissions means reducing carbon dioxide (carbon) emissions. Actions to minimise emissions can occur during the operation of a building, and also during the construction of that building/development.

## Minimised greenhouse gas emissions from operational energy consumed

Net zero carbon/carbon neutrality in operational energy consumption is not difficult to achieve in new developments.

Developments can be built to be net zero carbon/carbon neutral emissions capable in terms of operational energy consumption where the energy source can readily be supplied from a renewable, fossil free fuel source. Electricity is an energy source for buildings that can readily be sourced from renewable energy whether from onsite solar photovoltaic (PV) panels, or offsite solar PV systems or wind via readily accessible GreenPower or carbon neutral energy purchasing. Installing electricity infrastructure ensures building occupants can readily choose when they wish to purchase 100% renewable zero carbon energy.

In addition standard, business as usual purchasing of electricity from the electricity grid is increasingly relying on more renewables for electricity generation. In the last year 32.8% of Victoria's grid electricity came from renewable electricity<sup>1</sup>. By 2025 this will be 40%, and 50% by 2030<sup>2</sup>. All electric services and appliances will automatically become greener due to the greening of the electricity network.

Natural gas on the other hand is methane and produces carbon dioxide when burned in heating, hot water or cooking. While trials are occurring for introducing clean burning hydrogen into our gas network, no clear path is confirmed on how and when all of the network could deliver beyond 10% hydrogen.

Installing gas infrastructure into buildings ties the development to burning a greenhouse gas fuel until the infrastructure is replaced. It is better for the environmentally conscious tenants and future users not to install gas infrastructure at the time of building development.

Carbon neutral energy supply ready	<p>The residential and hotel parts of the development will be built to facilitate going net zero carbon emissions in operation. To achieve this, no gas will be included.</p> <ul style="list-style-type: none"> <li>Space heating and cooling will be heat pump technology, not gas.</li> <li>HWS will be electric heat pump with storage tanks</li> </ul>	Additional sustainability practice
------------------------------------	---	------------------------------------

<sup>1</sup> OpenNEM <https://opennem.org.au/energy/vic1/?range=1y&interval=1M> 18 Oct 2020-18 Oct 2021.

<sup>2</sup> Victorian Government legislated Renewable Energy (Jobs and Investment) Act 2017 <https://www.energy.vic.gov.au/renewable-energy/victorias-renewable-energy-targets>

Reduced reliance on fossil fuels	Non-residential areas will reduce their reliance on fossil fuel use: <ul style="list-style-type: none"> <li>• Space heating and cooling will be heat pump technology, not gas.</li> <li>• HWS will be electric heat pump with storage tanks</li> <li>• Gas services will be limited to commercial tenancy cooking</li> </ul>	Additional sustainability practice
----------------------------------	--	------------------------------------

As further background, gas is used broadly and heavily in Victoria. **Almost 90% (88%) of Melbourne homes are dual fuel**<sup>3</sup> i.e. they use both gas and electricity, and 75% of average dwelling energy use is gas (see table below). Gas is typically used for space heating, hot water heating and for cooking, and electricity for all other uses.<sup>4</sup>

*Average daily energy use of Melbourne homes and split for dual fuel dwellings (almost 90% of dwellings)*

Average dwelling energy use	Energy use per day	% of total dwelling energy use
Electricity	12 kWh/day	25%
Gas	36.5kWh/day	75%
<b>Total energy consumption</b>	<b>48.5kWh/day</b>	<b>100%</b>

In Victoria, space conditioning (heating and cooling our buildings) and hot water generation are by far the largest components of residential buildings' energy consumption. These provide a significant opportunity for reducing operational energy consumption and the greenhouse gas emissions from operational energy consumption where renewable energy is used.

### Minimised greenhouse gas emissions during construction

Net zero carbon emissions / carbon neutrality in the construction of a building takes a little more thought or expense than net zero carbon emissions / carbon neutrality in the operational energy of a building. There is a very high level of embodied energy (carbon) built in to most materials used.

Simple approaches can minimise embodied carbon in new buildings:

1. Source materials locally where possible to reduce carbon emissions generated in transport
2. Maximise timber use
3. Select materials variants that utilise lower carbon inputs. There are variants available within most material types. A key low carbon variant is where waste or recycled products from other industrial processes are used such as with greener conc.

See Materials section of this report for more detail on lower carbon construction options.

## 2 Energy Efficiency

### Goals

- To improve the efficient use of energy by ensuring the development demonstrates potential for ESD initiatives at the planning stage
- To reduce total operating greenhouse gas emissions
- To reduce energy peak demand through particular design measures (e.g., appropriate building orientation, shading to glazed surfaces, optimise glazing to exposed surfaces, space allocation for solar panels and external heating and cooling

### Initiatives

Improved building fabric, heating and cooling, and hot water supply (non-residential)	<p>The proposed development will achieve improvements on the Deemed to Satisfy (DtS) requirements of NCC 2019 Section J, including:</p> <ul style="list-style-type: none"> <li>• 10% improvement on NCC2019 insulation levels (total R-value upwards and downwards) for all exposed floors and ceilings (forming part of the envelope);</li> <li>• Wall insulation and glazing systems within NCC2019 allowances for wall-glazing fabric;</li> <li>• Heating and cooling systems within 85% of the best CoP/EER available (or within one star) for the required capacity; and</li> <li>• Water heating systems within one star of the best available, or 85% of the performance of the best available for the required capacity.</li> </ul> <p>Alternatively, if JV3 modelling is undertaken to verify building fabric performance, the proposed building will demonstrate equivalent or better energy efficiency when compared to an 'intermediate building' representing 10% improvement on NCC2019 Section J Deemed to Satisfy floor/roof insulation levels (BESS Best Practice).</p>	NCC2019 Part J, BESS Energy
Energy Rating (Residential)	<p>Current mandatory 6 star average (5 star minimum) energy efficiency requirements for class 2 dwellings will be exceeded.</p> <p>The proposed development has been demonstrated as being able to and will achieve a 6.7 star average energy rating in line with the City of Port Philip Best Practice ESD requirements and existing planning permit condition 3.</p> <p>Sample energy ratings (Six ratings) have been provided, demonstrating this commitment can</p>	SDAPP – Energy efficiency / BESS tool / BCA (Exceeded)

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

	readily be achieved. Refer to additional details below and Appendix 2 for further information.	
Maximum Cooling and Heating Loads	<p>The proposed development will meet the residential maximum cooling load requirement for the relevant climate zone.</p> <p>This development is located in NatHERS climate zone '21- Melbourne RO' with annual load limits as follows:</p> <ul style="list-style-type: none"> <li>Cooling limit of 30 MJ/m<sup>2</sup></li> <li>Heating limit of 88 MJ/m<sup>2</sup></li> </ul> <p>The maximum cooling and heating loads for the development are 29.9 MJ/m<sup>2</sup> and 81.5 MJ/m<sup>2</sup> respectively, as indicated by the preliminary energy ratings.</p>	BCA/NCC 2019
Building sealing	<p>Building sealing will be in accordance with NCC 2019 Volume 1 Part J3 <i>Building Sealing</i> / Volume 2 Part, 3.12.3 <i>Building Sealing</i></p>	NCC2019 Volume 1 Part J3 / NCC2019 Volume 2 Part 3.12.3
	No power data points etc. will be installed on external walls where insulation removal for electrical safety would compromise the external wall envelope. Alternatively, if installed, acoustic fire rated wall boxes will be installed behind these power and data points.	Additional sustainability practice
Hot water supply	The hot water supply will be from electric heat pump storage units.	SDAPP - Energy efficiency / BESS tool
Heating and cooling	Heating and cooling will be efficient inverter reverse cycle air-conditioners and selected to be within 1 star of the best available system on the market of relevant size/capacity.	SDAPP - Energy efficiency / BESS tool
Energy efficient cooking	<p>Residential Kitchen cooktops will be electric induction type. These are significantly more energy efficient than traditional electric coil or ceramic cooktops as they do not need to heat up an electric coil.</p> <p>Induction cooktops are also more efficient as they heat up much faster than traditional electric cooktops, so they do not need to run as long.</p> <p>Induction cooktops are now readily available at prices competitive with traditional electric cooktops.</p> <p>Gas cooktops burn a fossil fuel which generates carbon emissions. Electric cooktops when</p>	Additional sustainability practice

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

	powered by 100% renewable energy do not generate carbon emissions. Hence installing electric cooktops does not lock in use of fossil fuels, but enables this energy use to be carbon neutral when all electricity is from a renewable source (wind, solar PV panels, batteries)																
Windows (Non-residential)	<p>Windows will be aluminium framed double glazing system as required to meet energy efficiency performance of the NCC2019 façade calculator. See appendix 3.</p> <p>A preliminary assessment has been undertaken to demonstrate how the proposed building can comply with these Deemed to Satisfy provisions. Note- a Section J - JV3 performance modelling solution may deliver different fabric specifications. This detail will be resolved during detailed design for the purposes of building certification.</p>	NCC-BCA Section J, NatHERS															
Windows (Residential)	<p>Windows will be energy efficient aluminium framed double glazed in accordance with the preliminary energy ratings.</p> <p>For more details on windows see IEQ section in this report.</p>	NCC-BCA Section J, NatHERS															
Natural ventilation (Non-residential)	The ventilating areas (i.e., total areas of the openable windows/doors) are minimum 5% of the total floor area of regularly used spaces. This minimises the need of mechanical ventilation.	BCA Part F4.6 – Additional sustainability practice															
Lighting (Non-residential)	<p>Lighting density throughout the non-residential part of the development will be within the Building Code of Australia (BCA) 2019 maximums. These are significantly lower than BCA 2016 maximums ie:</p> <table border="1"> <thead> <tr> <th>Space</th><th>NCC2016 (W/m<sup>2</sup>)</th><th>NCC2019 (W/m<sup>2</sup>)</th></tr> </thead> <tbody> <tr> <td>Storage</td><td>8</td><td>1.5</td></tr> <tr> <td>Offices</td><td>7 or 9</td><td>2.5 or 4.5</td></tr> <tr> <td>Carpark</td><td>6</td><td>2</td></tr> <tr> <td>Common areas (eg. corridors)</td><td>8</td><td>5</td></tr> </tbody> </table> <p>The very significant improvement in LED lighting over recent years allows this gain without a loss in illuminance.</p>	Space	NCC2016 (W/m <sup>2</sup> )	NCC2019 (W/m <sup>2</sup> )	Storage	8	1.5	Offices	7 or 9	2.5 or 4.5	Carpark	6	2	Common areas (eg. corridors)	8	5	BCA Part J6 – Mandatory
Space	NCC2016 (W/m <sup>2</sup> )	NCC2019 (W/m <sup>2</sup> )															
Storage	8	1.5															
Offices	7 or 9	2.5 or 4.5															
Carpark	6	2															
Common areas (eg. corridors)	8	5															

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

Lighting (Residential)	<p>Lighting density throughout the development will be reduced to at least 20% below the maximum allowed by the BCA 2019 (e.g.</p> <ul style="list-style-type: none"> <li>• 4W/m2 rather than 5W/m2 for dwellings</li> <li>• 4W/m2 rather than 5W/m2 for common areas such as corridors).</li> </ul> <p>Good LED residential downlights at 6W now provide better lighting output than 50W halogens so generally make this target easy to achieve.</p> <p>Motion sensors will be included in lighting circuits to storerooms and common areas.</p>	BCA Part J6 – Additional sustainability practice
External lighting	External lighting to common areas and carparks will have a daylight sensor and either timer or motion sensors installed.	BCA Part J6
Individual metering of services	Electricity will be individually metered for each dwelling, and other tenancies ensuring energy saving behaviour is rewarded.	Additional sustainability practice
Solar PV	<p>Solar PV panels of approx. 16kW capacity will be installed to supply power to the development. This will primarily service common area corridors, lifts etc.</p> <p>If facing north at a 10° angle from horizontal plane (appropriate minimum angle on flat roofs to ensure self-cleaning) this system is expected to generate approximately 19,389 kWh/year.</p>	BESS Energy

## Additional Details

### Preview energy ratings

The energy efficiency rating of a development is directly affected by the passive solar design characteristics of dwellings which include the orientation of the residences, windows, window sizes, shading of windows; and also, the levels of insulation, window type selected (i.e., single or double glazing with standard or insulated frames) and thermal mass levels within the space. These elements will be combined in such a way to ensure the residences achieve the required 6-star energy efficiency.

A sample of 6 apartment types (Type A3, B1, C1,C2,D2 and D3– see appendix 2) indicates that the average energy rating potentially able to be achieved for the dwellings in this development is 6.7 stars. Dwellings were selected to provide a representation of similar or likely lower-performing similar dwellings.

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

Apartment Type	Number of thermally similar dwellings	Cooling Load (MJ/m <sup>2</sup> )	Star Rating
A3	16	24.4	6.9
B1	4	29.9	6.4
C1	11	22.3	7.1
C2	7	29.9	6.3
D2	5	27.8	6.8
D3	1	27.1	6.2
Total/ weighted average	44	-	6.7

Preview ratings on sampled dwellings indicate that the improved glazing may be required for all dwellings to achieve 6.6 stars average and NCC maximum heating and cooling load allowances. See appendices (to be confirmed when undertaking final certification energy ratings).

Maximum Cooling Loads

The proposed development commits to achieving the maximum cooling load for the climate zone '21 – Melbourne RO' of 30MJ/m<sup>2</sup> per annum per clause '55.07-1 Energy Efficiency'.

Cooling loads for each dwelling will be assessed during the building certification energy ratings and adjusted as appropriate. Should a reduction in a dwelling cooling load be required there is potential for this development to adapt through the specification of higher performing glazing and/or improved local shading as appropriate.

Further information is contained within the appendices.

Heating and cooling

Heating and cooling will be provided by reverse cycle air-conditioner units (which incorporate heat pump technology for the heating component).

BESS Energy Efficiency category requires heating and cooling system efficiency to be of the best 15% of available products within a certain size range, or within 1 star of the best available relevant system.

Air-conditioners will be reviewed against the following government website to confirm their performance prior to specification. For simple availability checking use the Basic search.

[https://reg.energyrating.gov.au/comparator/product\\_types/64/search/](https://reg.energyrating.gov.au/comparator/product_types/64/search/)

Hot water meters in apartments

Meters are usually installed by the builder or developer within the building, and are usually located in a Common area such as a hallway

cupboard, garage, basement, behind a ceiling or wall access panel in the foyer or in the corridor on each floor.

In some cases, the builder may have installed the meter in your apartment. These can often be located under the sink or vanity unit in the bathroom or behind a hidden access panel in the wall. Refer to Origin Energy's fact sheet Information about your Hot Water meter <https://www.originenergy.com.au/content/dam/origin/residential/docs/hot-water/your-centralised-hot-water.pdf>

Improved insulation (non-residential)

The proposed development will deliver a 10% improvement on NCC2019 minimum requirements for floor and roof insulation within conditioned spaces. This equates to:

Building element	Part J – DTS required insulation levels	10% improvement on DTS insulation levels
Roof	3.2	3.52
Floor	2.0	2.2

Building sealing

Building sealing prevents un-intended air movement through the thermal envelope (infiltration and exfiltration). Air gaps in the building fabric result in uncontrolled heating and cooling demands in addition to high risk of structural damage due to condensation internally in well insulated envelope walls.

It is important to ensure air-tight connections between internal lining on exterior walls, ceiling and floor plate, around electrical and hydraulic penetrations going through the air-tight barrier by using a system of grommets, membranes and tapes. Alternatively, a combination of plasterboard and caulking with high level attention to detail can make a large difference to the air leakage rate of the building

To address air leakage through doors and windows, the following measures are recommended:

- Compressible foam or similar seals provided around doorways from conditioned to non-conditioned spaces;
- Draft protection devices along the bottom edge of external swing doors;
- Multi-fit cable and pipe seals/adhesive membrane grommets for sealing around pipes or conduits passing through the building envelope; and
- Self-closing dampers fitted to exhaust fans.

Solar PV (on flat roofs)

All roofs must be structurally designed to be able to accommodate proposed solar photovoltaic (PV) panel coverage. Typically the structural allowance for this is small.

Solar panels should ideally be on a minimum angle of 10 degrees for self-cleaning<sup>6</sup>.

Panels orientated to the north are the most efficient, but can be oriented to the north east, east, north west or west, or a combination of these orientations as required to optimise solar power generation time with power use.

Moreland City Council has recently published the [Moreland Zero Carbon Development Guidelines – Solar PV](#). This guideline provides good background and technical advice for installing Solar PV electricity generation systems in townhouses, apartments and warehouses.

Date: 20/02/2024

## 3 Indoor Environment Quality

### Background

Access to daylight and sunshine is advantageous to the wellbeing of humans.

Many paints, adhesives, sealants and flooring types contain Volatile Organic Compounds (VOCs) which are released into the air in our homes and workplaces. Joinery has, over the last 30 years, contained high levels of formaldehyde. VOCs and formaldehyde are recognised as potentially harmful to humans as well as contributors to atmospheric pollution.

### Goals

- To achieve a healthy indoor environment quality for the wellbeing of building occupants, including the provision of fresh air intake, cross ventilation and natural daylight.
- To achieve thermal comfort levels with minimised need for mechanical heating, ventilation and cooling.
- To reduce indoor air pollutants by encouraging use of materials with low toxic chemicals levels.
- To minimise noise levels and noise transfer within and between buildings and associated external areas.

### Initiatives

Natural ventilation	All windows will meet or exceed BCA minimum 5% room area allowance. The openable component is to be shown on the plans.	BCA requirement
	All dwelling habitable room windows will include an openable component.	Additional sustainability practice
	Hinged doors to habitable rooms will have mechanical or magnetic door catches to keep doors open and enable natural (cross)ventilation between rooms.	BESS tool
	At least 50% of apartments meet Clause 58.07-4 Standard D27 ventilation path requirements for ventilation openings on two different orientations and maximum and minimum ventilation path lengths.  Additionally, 100% of apartments meet the requirements of BESS IEQ 2.1 effective natural ventilation	Planning Scheme requirement BESS IEQ 2.1
Ventilation (non-residential)	Mechanical ventilation is proposed for the Restaurant, hotel and the office. The outdoor air flow to all relevant spaces shall exceed the minimum requirements of AS1668.2 by minimum 50% to achieve BESS compliance.	BESS

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

Daylight (Residential)	Glazing levels will meet the BCA minimum 10% room allowance in all habitable rooms.	NCC-BCA Section F
	There are no saddleback/battle-axe bedrooms included in this development that would prevent daylight getting to half of a room.	Additional sustainability practice
	Light coloured walls internally will help to maximise daylight levels.	Additional sustainability practice
Daylight (Non-residential)	<p>For the non-residential parts of this development (GF to 9F- Restaurant, Offices and hotel rooms), The Green star hand calculator can not be used to assess the BESS IEQ 1.4 Daylight access Non-residential credit considering the overshadowing caused by the neighbouring buildings and glazing visual transmittance (VLT) of less than 40% as calculated in the section J 1.5 DTS wall -glazing calculator.</p> <p>However, for the hotel rooms (2<sup>nd</sup> to 9<sup>th</sup> floor) comprising of bed areas as a primary space, if BESS Residential daylight DTS pathway for 'Bedrooms' is considered, at least 64% of hotel rooms pass with 2 out of 4 DTS criteria as mentioned below,</p> <ul style="list-style-type: none"> <li>All (hotel) bedrooms are less than 8m deep (5m if south facing)</li> <li>All (hotel) bedrooms outlook to boundary line is 6 meters</li> </ul> <p>The daylight ingress to the newly proposed hotel floors remains the same as previously proposed apartments on these floors.</p>	BESS- IEQ 1.4
Glare (internal sources)	All bare light sources in non-residential spaces will be managed with baffles, louvres, translucent diffusers, ceiling design or other means that obscures the direct light source from all viewing angles of occupants.	Green Star
Lighting Comfort	Lights installed in the development will be flicker-free.	Green Star
Low VOC products	Light coloured walls internally will help to maximise daylight levels.	Additional sustainability practice
Low formaldehyde products	Engineered wood products (including MDF, particleboard and plywood) will be Class E1 formaldehyde or better. Formaldehyde is used in the production of resins that act as glues for engineered wood products and is a colourless	Green Star

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

	gas with a strong odour. Exposure to formaldehyde can cause irritation in the eyes, nose and throat with various authorities recommend E1 as a maximum emissions class.	
--	---	--

### Additional details

Ventilation paths Suppliers of mechanical or magnetic door latch stops that can keep doors open include: Gainsborough, Architect and Scope and Bellvue Imports.

Low VOC Volatile Organic Compounds is the term used to describe several hundred petrochemical solvent type compounds found in paints, adhesives, sealants, carpets, reconstituted wood products, and new furniture. Newer buildings generally have higher concentrations of these VOC's that contribute to headache, lethargy etc. in occupants.

**Low VOC paints, adhesives and sealants** – the VOC content of paints, adhesives and sealants will not exceed the levels listed in the table below (VOC limits are less water and exempt compounds) (from the Green Star Design and As Built v1.1 guidelines). Low VOC adhesives and sealants are readily available and can be purchased in bulk to minimise the price premium. Mapei adhesives offer a full low VOC adhesives range

Product category	Maximum VOC content (g/litre)
General purpose adhesives and sealants	50
Interior wall and ceiling paint, all sheen levels	16
Trim, varnishes and wood stains	75
Primers, sealers and prep coats	65
One & two pack performance coatings for floors	140
Acoustic sealants, architectural sealant, waterproofing membrane and sealant, fire retardant sealant and adhesives	250
Structural glazing adhesive, wood flooring and laminate adhesive and sealants	100

Low VOC paints are readily available at all suppliers:

- Wattyl ID Eco System Low VOC
- Haymes - [www.haymespaint.com.au](http://www.haymespaint.com.au)
- Porters Paints - [www.porterspains.com](http://www.porterspains.com)
- Bio Products Aust - [www.bioproducts.com.au](http://www.bioproducts.com.au)
- Ecolor - [www.ecolour.com.au](http://www.ecolour.com.au)
- Livos - [www.livos.com.au](http://www.livos.com.au)
- Murobond - [www.murobond.com.au](http://www.murobond.com.au)

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

- Oikos non-toxic Paints - [www.designerpaintco.com](http://www.designerpaintco.com)
- The Natural Paint Company - [www.naturalpaint.com.au](http://www.naturalpaint.com.au)

Low  
formaldehyde  
products

Reduced formaldehyde emissions in engineered wood products are  
classed as below:

Class	Limits (mg/L)
Super E0	Less than or equal to 0.3
E0	Less than or equal to 0.5
E1	Less than or equal to 1.0
E2	Less than or equal to 2.0
E3	Greater than 2.0

Companies offering low formaldehyde engineered wood products  
include:

- Polytec offers E1 and E0.
- Nikpol offers E1, E0 and Super E0 for select products.
- Austral Plywood E1, E0 and Super E0 for select products.
- Laminex Australia offer E1, E0, Super E0 and no added formaldehyde for select products.

## 4 Water Conservation

### Background

As populations increase and global warming contributes to fast climate change, the access to clean potable water will become more of an issue to Australians and the world. Inefficient use of water can lead to the destruction of habitat for dams, over-use of artesian water supplies creating a rising water table or intensive energy use for desalination plants.

### Goals

- To ensure the efficient use of water.
- To reduce total operating potable water use.
- To encourage the collection and re-use of stormwater
- To encourage the appropriate use of alternative water sources.
- To minimise associated water costs.

### Initiatives

Water efficient fixtures, fittings and appliances	Water efficient fixtures, fittings and appliances have been selected in line with the following WELS ratings: <ul style="list-style-type: none"> <li>• 4 star shower</li> <li>• 4 star toilets</li> <li>• 6 star bathroom taps</li> <li>• 6 star kitchen taps</li> <li>• 6 star dishwashers</li> </ul>	BESS, Green Star
---	--	------------------

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

Rainwater collection and use	Rainwater collection and use will involve the installation of a rainwater tank of a minimum 9,000L capacity, collecting water from all roof areas indicated on STORM area proof (appendix 5) and supplying it to all the ground and first floor toilets in the development.	STORM, BESS tool, Green Star
Accessibility of pumps	Water pumps and manual over-ride switches will be readily accessible for access in the event of malfunction.	Additional sustainability practice
Water efficient landscaping	Proposed planting will be water efficient and will not require watering after an initial period when plants are getting established. Therefore, no irrigation system is proposed.	BESS Water 3.1

#### Additional details

Water efficient fixtures & fittings

All fittings to be specified are based on recommendations from [www.savewater.com.au](http://www.savewater.com.au) or from the product search on the following site [www.waterrating.gov.au](http://www.waterrating.gov.au) and will be amongst the most efficient on the market, and a significant improvement on fittings historically used in most buildings. Traditionally shower heads would use more than 16 litres of water per minute. One star shower heads use between 12 – 16 litres per minute, 2 star shower heads use between 9-12 litres per minute. To reduce this to 6 litres per minute with a 4 star shower head is a significant improvement.

Further water efficient appliances will be determined from sources such as the following web site <http://www.waterrating.gov.au>.

## 5 Stormwater Management

### Background

Pollutants that build up on impervious surfaces get washed into the stormwater system and end up in local waterways. Water Sensitive Urban Design is now a major goal of urban development to prevent this occurring. The quality of water leaving a site (and peak and total stormwater run-off volumes) can be improved by collection of water in water tanks, natural infiltration through gardens and lawns into the soils, and minimisation of impervious pavements or the shedding of water from impervious surfaces into garden beds that have particularly good infiltration into the ground – known as infiltration beds. The following measures have been adopted to ensure these concerns are addressed.

### Goals

- To reduce the impact of stormwater run-off
- To improve the quality of stormwater run-off
- To achieve best practice stormwater quality outcomes
- To incorporate the use of water sensitive urban design, including stormwater re-use

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

### Initiatives

Best Practice Stormwater treatment	<p>The following is proposed to achieve 100% of Melbourne Water STORM calculator Best Practice Stormwater treatment goals:</p> <ul style="list-style-type: none"><li>• Rainwater shed from the nominated roof areas (minimum 724.5m<sup>2</sup>) will be collected in a rainwater tank of 9,000L capacity. The rainwater tank will supply water to all the ground and first floor toilets for flushing purposes.</li><li>• Leaf diverting rain heads and first flush diverters will be included upstream of the tank to divert the initial sediment flow when rain events occur from entering the tank.</li></ul>	STORM, Planning scheme clause 53.18
------------------------------------	---	-------------------------------------

### Additional details

Water sensitive urban design - rainwater tanks

The proposed rainwater tank collection system provides benefits of reducing the peak and total stormwater run-off when it rains. Since the water tanks are connected to all of the toilets, the tank water volumes are run down regularly. This leaves spare capacity to collect new rainfall water and hence reduces the level of rain from the roofs going down the drains. In addition, the pollutants leaving the site to the stormwater system (and hence local creeks) is reduced, by water collected off the roofs, going via the toilets into the sewer system rather than stormwater system as would otherwise have been the case. The final design of the Stormwater system will meet council drainage engineers' requirements. The designed system complies with Melbourne Water STORM requirements i.e., meets Victorian Best Practice Stormwater guidelines – see appendix 5

## 6 Material Selection

### Background

Careful selection of construction materials can help to limit the environmental impacts of the production, transport and incorporation of these materials in our buildings. In many cases there are similarly performing, comparable but more environmentally friendly product selection options available.

### Goals

The goals in environmentally sustainable construction material selection should be to:

- Limit the use of new materials where possible - to help minimise the detrimental outcomes of product manufacture or modification

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

- Select durable materials and re-use materials where possible – increase the lifespan of all products.
- To minimise the environmental impacts materials used by encouraging the use of materials with a favourable lifecycle assessment based on the fate of materials, their recycling / reuse potential, their embodied energy, their biodiversity, human health, and environmental toxicity impacts.

### Initiatives

Greener concrete mixes	20-35% slag and/or flyash or similar geopolymer mixes will be incorporated in on-site on-ground poured structural and paving concrete mixes where vehicles will not be regularly driving over the concrete, subject to structural engineer's approval.  A concrete mix with circular economy components and lower embodied energy will be used. Waste product slag and/or flyash (Supplementary Cement materials SCMs)- will partially substitute carbon intensive Portland cement in concrete mixes.	SDAPP / Green Star
Greener aggregate options	Aggregate and sand will be from circular economy and lower embodied energy sources. 50% recycled aggregate or recycled glass sand will be used as sub-base under paths and or roads subject to design engineer's approval.	Additional sustainability practice
Greener pipe bedding options	100% recycled glass sand will be used for pipe bedding (plumbing pipe, electrical cable etc) In preference to mined virgin sand, subject to the design engineer's approval.	Additional sustainability practice
Light coloured roofing	The building roof colour is to be light – medium colour (as per the BCA definitions) rather than dark to deliver a cooler surrounding micro climate) and help mitigate the overall Urban Heat Island effect.  Lighter external surfaces also result in lower cooling requirements and less air-conditioning use.	Additional sustainability practice
Sustainable timbers	Timbers sourced from unmanaged (often overseas) rainforests disrupt under threat ecosystems. No unsustainable rainforest timbers will be incorporated i.e. no Oregon, Western Red Cedar, Meranti, Merbau, Teak or Luan.	Green Star
Accredited plantation timber	Framing timber will sourced from accredited sustainable plantations (either FSC or PEFC/AFS accreditation) that mitigates damage to ecosystems for flora and fauna.	SDAPP / Green Star

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

Glasswool insulation	Where glasswool insulation is to be used, a product with greater than 50% recycled glass and without the use of formaldehyde as a binder (such as Earthwool or Green Tag certified CSR Bradford Gold batts) will be used.	Additional sustainability practice
Carpet underlay	Where carpet is installed, underlay with recycled content will be used under carpets  Alternatively, a carpet underlay that is third party GECA certified will be used (e.g. Cloudwalk carpet cushion range).	Additional sustainability practice

### Additional details

Greener concrete mixes - Partial cement replacement in concrete

Cement production is the single biggest industrial producer of greenhouse gas generating emissions. Cement production causes 8% of global emissions – more than the global car fleet. (From page 7 of the BZE Rethinking Cement report which references International Energy Agency 2015. Various data sources <http://www.iea.org/statistics/>).

The industry standard cement type has been Portland cement, for which the raw material is limestone. The first stage of cement making is to transform limestone (calcium carbonate -  $\text{CaCO}_3$ ) into lime ( $\text{CaO}$ ), thus releasing carbon dioxide ( $\text{CO}_2$ ) a Greenhouse Gas as a waste product. This single process accounts for about half of the carbon emissions associated with cement making, and therefore around 4% of the world's total emissions. The rest comes from the heat required to drive the production processes and the energy to grind and transport material.

Alternative supplementary cementitious materials (SCM) concrete mixes have a complying strength, are a similar price and use a reduced amount of high greenhouse gas producing Portland cement when compared with standard cement mixes. They also incorporate the recycling of industrial waste products such as fly ash and slag and reduce the amount of raw resources required to produce the end product.

Embodied energy levels:

Concrete Product	Embodied carbon $\text{TCO}_2\text{-e/m}^3$	Embodied carbon as a percentage of OPC 32MPA
Generic 32MPA Ordinary Portland Cement	0.481	100%
With 20% flyash	0.397	82.5%
With 20% blast furnace slag	0.404	84.0 %
With 50% flyash	0.273	56.8%
With 50% blast furnace slag	0.288	60.0%

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

With 100% slag or flyash geopolymer replacement (must be structurally approved. Suitable for some applications)	0.120	25.0%
Holcim EcoPact (lowest non geopolymer we are aware of)	0.198	41.1%
Holcim EcoPact Zero (ECOPact with carbon offset)	0.028	5.8%

Source – The Green Book

Suppliers of geopolymer – Supplementary Cementitious Materials  
cement:

Company	Product	Contact
<b>Hansen Concrete</b>	Ask for the <b>Green Star mix</b> . Common mixes include 30-50% fly ash/slag component	Bob Aldersy 03 9274 3700 Kevin Skilling 9570 3244 Dave Miller 0418 548 321
<b>Boral Concrete</b>	<b>Envirocrete</b> <b>Envirocrete Plus</b> <b>Envisia</b>	Office 13 30 06 Tania Neil 0401 892 027
<b>Barro Concrete</b>	<b>Triple blend mix</b> is the fly ash/slag/cement mix - generally has 20-35% fly ash and/or slag	Tom Kovaks 9646 5520 Piero 0438 181 681
<b>Holcim</b>	<b>ECOPact</b> Low carbon concrete range offers between 30-60% reduction on embodied carbon.  ECOPact <sup>ZERO</sup> is a full 100% Carbon Neutral product where ECOPact concrete mix is used and emissions are offset with a certified eligible carbon offset through the Climate Active program.	Dylan Viviers 0429 790 600

Note Wagners have developed a product called Earth Friendly  
Concrete (EFC) which uses no Portland cement, just fly ash and slag  
as the binders. This product has very low embodied energy. We are  
regularly checking its availability in Melbourne.

Greener  
aggregate  
options

Recycled rock is cheaper than virgin quarry product and less product  
is required for a job, hence also reducing the transport emissions.

100% recycled rock is able to be used in road and path sub-base and  
per Alex Frasers advice can constitute up to 65% saving on embodied  
emissions depending on the distance of transport from plant to site.

Greener pipe bedding options Recycled glass sand is competitively priced with beach sand and has OHS benefits as the grains are larger and have lower potential to cause health issues compared to virgin sand.

Alex Fraser have sites in Laverton, Epping and Dandenong to supply this product Melbourne wide.

Light coloured roofing The proposed development will adhere to the NCC2019 Section J Deemed to Satisfy requirements of J1.3 Roof and ceiling construction. The upper surface of all roof elements will have a solar absorptance not greater than 0.45.

The Colorbond colour range noted below can inform solar absorptance values of different finishes for metal roof construction.

[https://colorbond.com/sites/default/files/pdf/brochures/colorbond\\_steel\\_colours\\_for\\_your\\_home\\_colour\\_chart.pdf](https://colorbond.com/sites/default/files/pdf/brochures/colorbond_steel_colours_for_your_home_colour_chart.pdf)

Glasswool insulation Recycled glass used for glasswool manufacture is typically glass that cannot be used in higher grade flat or container glass uses. If using glass based (glasswool/fibreglass) insulation batts the following products which have better environmental characteristics:

- Earthwool by Knauf - Earthwool (Green Tag certified) is made using up to 80% recycled glass and with ECOSE® Technology a sustainable bio-based binder that contains no added formaldehyde or artificial colours or dyes, the brown colour is completely natural.
- CSR Bradford Gold batts (Green Tag certified) made from up to 80% recycled glass.

Carpet underlay Carpet underlay with significant recycled content (per above) or other environmental benefits will be used.

Suggested recycled underlay products include:

- **Dunlop flooring** - <http://www.dunlopflooring.com.au/sustainability/recycle-by-dunlop.asp>
- **Airstep carpet underlay** - <http://www.airstep.com.au/environmental-overview/recycling/>

The Cloudwalk carpet cushion range of underlay is third party GECA certified – it has very low VOC emissions avoids toxic or hazardous chemicals in the manufacturing and the underlays are fully recyclable if the user drops them off at Cloudwalk (TBC if collections also occur in Victoria). Their manufacturing processes are also ISO9001 Quality Management System and ISO14001 Environmental Management System certified.

### CITY OF PORT PHILLIP PORT PHILLIP PLANNING SCHEME

## 7 Location and Transport

### Goals

- To ensure that the built environment is designed to promote the use of walking, cycling and public transport in that order
- To minimise car dependency
- To promote the use of low emission vehicle technologies and supporting infrastructure

### Location

The location of this development meets urban consolidation goals as set out in government policy documents. The development is relatively close to public transport and facilities.

The location achieves a **Walk Score** of 98 which is considered as walkers paradise.

### Initiatives

Bicycle parking	<p>The proposed development includes the provision of 28 formally allocated bicycle parking spaces for residents located in the basement carpark. 6 bicycle parking spaces for visitors are also provided on the ground floor.</p> <p>This number of bicycles meets the requirements of the Planning scheme.</p> <p>This allocation supports promoting the use of sustainable personal transport and is especially relevant given the suitable location of the development.</p>	Planning Scheme clause 52.34 / SDAPP – Transport / BESS
Electric vehicle charging	<p>Provision will be included at the carpark for a minimum of 6 x 30-32Amp power points to be installed to facilitate charging of electric vehicles.</p>	BESS tool
Local public transport information packs	<p>Relevant local train, tram and bus timetables will be included in the Building Users Guide provided. Also included will be brief details of the Melbourne myki public transport payment card system including how to register and load funds against a myki card.</p> <p>Occupants will be alerted to the existence of various public transport smartphone apps such as the Public Transport Victoria app and/or train or tram tracker</p>	SDAPP - Transport
Public transport	<p>The proposed location is serviced by the following public transport options:</p> <ul style="list-style-type: none"><li>• Train – 200 metres from the site</li><li>• Bus – 500 metres from the site</li></ul>	Additional sustainability practice

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

	These are able to be viewed on the public transport Local Area Map attached in the appendices.	
--	--	--

### Additional details

Public transport	<p>Tram, bus and train timetables can be accessed from <a href="http://ptv.vic.gov.au/timetables/">http://ptv.vic.gov.au/timetables/</a></p> <p>A full range of Public Transport Victoria maps can be sourced from <a href="http://ptv.vic.gov.au/getting-around/maps/">http://ptv.vic.gov.au/getting-around/maps/</a> For more train specific information visit <a href="http://www.metrotrains.com.au">www.metrotrains.com.au</a></p> <p>A Travel Smart map showing major local travel interchanges can be obtained for the councils listed on the site <a href="http://www.transport.vic.gov.au/projects/travelsmart/maps">http://www.transport.vic.gov.au/projects/travelsmart/maps</a></p>
------------------	---

## 8 Waste Management

### Goals

- To promote waste avoidance, re-use and recycling during the design, construction and operation stages of development.
- To ensure durability and long-term re-usability of building materials.
- To ensure sufficient space is allocated for future change in waste management needs, including (where possible) composting and green waste facilities.

### Initiatives

Demolition stage	<p>The developer has committed to ensuring the demolition contractor recycles a minimum of 80% of materials from the existing building to be demolished.</p> <p>The demolition contractor will be required to identify in advance what materials will be recycled, and confirm in writing on company letterhead the percentage of materials by mass actually recycled on completion of works.</p>	SDAPP - Waste
Construction waste	A minimum of 80% of materials will be recycled during construction.	SDAPP - Waste

	Written documentation required from contractor(s) in advance on company letterhead confirming items to be recycled, and on completion, confirmation of percentage of materials recycled.	
Plastering waste	The plastering contractor will be required to supply their own bin and recycle plasterboard off-cuts.	Additional sustainability practice
Separate waste stream collection	Space is allowed for storage of separate garbage and recycling bins and FOGO (food organics and garden organics) bins.  Space has been provided for the future provision of a glass recycling bin(s).	SDAPP - Waste

### Additional details

Recyclable materials

The following materials can generally be recycled:

- Bricks
- Concrete products (ie. Blocks, roof tiles, pavers etc)
- Unpainted or treated timber
- Steel / metal products
- Glass
- Plasterboard
- Plastics
- Carpet underlay
- Carpet tiles
- Asphalt
- Cardboard
- Green waste

Bin companies or similar that recycle more than others include:

- Jobsite Recyclers. <http://www.jobsiterecyclers.com.au/>
- Mobius Waste <http://www.mobiusmr.com.au/>
- Eastern Recycling [www.easternrecycling.com.au](http://www.easternrecycling.com.au)
- BinGo Industries [www.bingoindustries.com.au](http://www.bingoindustries.com.au)

Plastering (recycling)

Bins are available from plasterboard recyclers such as ecoGypsum (<http://www.ecogypsum.com.au/collections.html>) or Sunshine Groupe (<http://www.sunshinegroupe.com.au/>). Alternatively contact recycling companies such as T&L recycling on 0407 867 133 or similar firms.

### CITY OF PORT PHILLIP PORT PHILLIP PLANNING SCHEME

Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

## 9 Urban Ecology

### Background

Urban development has seen the destruction and displacement of plant species and in turn wildlife habitat. With new developments there is an opportunity to redress this that should be taken up. In all infill development cases there should be an improvement on the current environment.

### Goals

- To protect and enhance habitat bio-diversity of the urban environment
- To encourage the retention of significant trees
- To encourage the planting of indigenous vegetation.
- To reduce CO2 in the atmosphere through increased vegetation
- To provide environmentally sustainable landscapes and natural habitats and minimise the urban heat island effect

### Initiatives

Erosion control	Silt fences, erosion control blankets, and/or drain filters will be utilised during construction to ensure top soil/earth is not eroded to drains and creeks.	Additional sustainability practice
Light coloured roofing	The building roof colour is to be light – medium colour (as per the BCA definitions) rather than dark to help mitigate the effects of the Urban Heat Island effect.	Additional sustainability practice

Date: 20/02/2024

## 10 Management, Innovation and Community Benefit

### Goals

- To encourage design and innovation in the development, which positively influence the improved life of, and sustainability of, the building.
- To encourage a holistic and integrated design and construction process and ongoing high performance.

### Initiatives

Innovation	The following items included in the Materials and IEQ sections demonstrate the proposed development is exceeding Best Practice requirements in these areas: <ul style="list-style-type: none"> <li>• Commitment to use SCM (partial cement substitutes slag and/or flyash) in concrete</li> <li>• Commitment to use of sustainable timbers (eg. non-rainforest timbers, FCS timbers etc.)</li> <li>• Commitment to low VOC paints, adhesives, sealants.</li> <li>• Commitment to use of low/no formaldehyde products</li> <li>• Commitment to recycling at least 80% of construction waste</li> </ul>	BESS tool
Access to Premises – Buildings	The development will comply with the Disability (Access to Premises – Buildings) Standard.	Disability (Access to Premises – Buildings) Standard 2010

## Appendix 1 - BESS Report

BESS Report

Built Environment Sustainability Scorecard

This BESS report outlines the sustainable design commitments of the proposed development at 28 Albert Rd South Melbourne Victoria 3205. The BESS report and accompanying documents and evidence are submitted in response to the requirement for a Sustainable Design Assessment or Sustainability Management Plan at Port Phillip City Council.

Note that where a Sustainability Management Plan is required, the BESS report must be accompanied by a report that further demonstrates the development's potential to achieve the relevant environmental performance outcomes and documents the means by which the performance outcomes can be achieved.

### Floorplans & elevation notes

Credit	Requirement	Response	Status
Management 3.1	Individual utility meters annotated		-
Management 3.3	Common area submeters annotated		-
Water 3.1	Water efficient garden annotated		-
Energy 3.1	Carpark with natural ventilation or CO monitoring system		-
Energy 4.2	Floor plans showing location of photovoltaic panels as described.		-
Stormwater 1.1	Location of any stormwater management systems used in STORM or MUSIC modelling (e.g. Rainwater tanks, raingarden, buffer strips)		-
IEQ 1.1	If using BESS daylight calculator, references to floorplans and elevations showing window sizes and sky angles.		-
IEQ 1.2	If using BESS daylight calculator, references to floorplans and elevations showing window sizes and sky angles.		-
IEQ 1.5	Floor plans with compliant bedrooms marked		-
IEQ 2.1	Dwellings meeting the requirements for being 'naturally ventilated'		-

Credit	Requirement	Response	Status
Transport 2.1	Location of electric vehicle charging infrastructure		-
Waste 2.2	Location of recycling facilities		-
Urban Ecology 1.1	Size and location of communal spaces		-
Urban Ecology 2.2	Green roof		-

Supporting evidence

Credit	Requirement	Response	Status
Management 2.2	Preliminary NatHERS assessments		-
Management 2.3a	Section J glazing assessment		-
Management 2.3b	Preliminary modelling report		-
Energy 1.1	Energy Report showing calculations of reference case and proposed buildings		-
Energy 3.1	Provide a written explanation of either the fully natural carpark ventilation or carbon monoxide monitoring, describing how these systems will work, what systems are required for them to be fully integrated and who will be responsible for their implementation throughout the design, procurement and operational phases of the building life.		-
Energy 3.6	Provide a written description of the average lighting power density to be installed in the development and specify the lighting type(s) to be used.		-
Energy 3.7	Provide a written description of the average lighting power density to be installed in the development and specify the lighting type(s) to be used.		-
Energy 4.2	Specifications of the solar photovoltaic system(s).		-
Stormwater 1.1	STORM report or MUSIC model		-
IEQ 1.1	If using an alternative daylight modelling program, a short report detailing assumptions used and results achieved.		-
IEQ 1.2	If using an alternative daylight modelling program, a short report detailing assumptions used and results achieved.		-
IEQ 1.5	A list of naturally ventilated buildings		-
IEQ 2.1	A list of naturally ventilated buildings		-

Credit breakdown

Management Overall contribution 2%

1.1 Pre-Application Meeting	0%
Score Contribution	This credit contributes 37.5% towards the category score.
Criteria	Has an ESD professional been engaged to provide sustainability advice from schematic design to construction? AND Has the ESD professional been involved in a pre-application meeting with Council?
Question	Criteria Achieved ?
Project	No
2.2 Thermal Performance Modelling - Multi-Dwelling Residential	100%
Score Contribution	This credit contributes 17.6% towards the category score.
Criteria	Have preliminary NatHERS ratings been undertaken for all thermally unique dwellings?
Question	Criteria Achieved ?
Apartment	Yes
2.3 Thermal Performance Modelling - Non-Residential	100%
Score Contribution	This credit contributes 27.2% towards the category score.
Criteria	Has a preliminary Energy Assessment been undertaken in accordance with NCC2019 Section J1.5?
Question	Criteria Achieved ?
Office	Yes
Other building	Yes
Criteria	Has preliminary modelling been undertaken in accordance with either NCC2019 Section J (Energy Efficiency), NABERS or Green Star?
Question	Criteria Achieved ?
Office	Yes
Other building	Yes
3.1 Metering - Residential	100%
Score Contribution	This credit contributes 8.8% towards the category score.
Criteria	Have utility meters been provided for all individual dwellings?
Question	Criteria Achieved ?
Apartment	Yes
3.2 Metering - Non-Residential	0%
Score Contribution	This credit contributes 3.7% towards the category score.
Criteria	Have utility meters been provided for all individual commercial tenants?
Question	Criteria Achieved ?
Office	No
Other building	No

3.3 Metering - Common Areas		70%
Score Contribution	This credit contributes 12.5% towards the category score.	
Criteria	Have all major common area services been separately submetered?	
Question	Criteria Achieved ?	
Apartment	Yes	
Office	No	
Other building	No	
4.1 Building Users Guide		0%
Score Contribution	This credit contributes 12.5% towards the category score.	
Criteria	Will a building users guide be produced and issued to occupants?	
Question	Criteria Achieved ?	
Project	No

**1.1 Potable water use reduction**

40%

Score Contribution	This credit contributes 71.4% towards the category score.
Criteria	What is the reduction in total potable water use due to efficient fixtures, appliances, rainwater use and recycled water use? To achieve points in this credit there must be >25% potable water reduction.
Output	Reference
Project	11176 kL
Output	Proposed (excluding rainwater and recycled water use)
Project	8313 kL
Output	Proposed (including rainwater and recycled water use)
Project	7880 kL
Output	% Reduction in Potable Water Consumption
Project	29 %
Output	% of connected demand met by rainwater
Project	27 %
Output	How often does the tank overflow?
Project	Never / Rarely
Output	Opportunity for additional rainwater connection
Project	3155 kL

**3.1 Water Efficient Landscaping**

100%

Score Contribution	This credit contributes 14.3% towards the category score.
Criteria	Will water efficient landscaping be installed?
Question	Criteria Achieved ?
Project	Yes

**4.1 Building Systems Water Use Reduction**

100%

Score Contribution	This credit contributes 14.3% towards the category score.
Criteria	Where applicable, have measures been taken to reduce potable water consumption by >80% in the buildings air-conditioning chillers and when testing fire safety systems?
Annotation	No water based fire testing or heat rejection systems
Question	Criteria Achieved ?
Project	Yes

1.3 Winter Sunlight		0%
Score Contribution	This credit contributes 5.2% towards the category score.	
Criteria	Do 70% of dwellings receive at least 3 hours of direct sunlight in all Living areas between 9am and 3pm in mid-winter?	
Question	Criteria Achieved ?	
Apartment	No	
1.4 Daylight Access - Non-Residential		0% <span>✗ Not Achieved</span>
Score Contribution	This credit contributes 13.2% towards the category score.	
Criteria	What % of the nominated floor area has at least 2% daylight factor?	
Annotation	With the VLT of less than 40% (as per the section J1.5- preliminary wall glazing calculator results) and shadowing by the adjacent buildings, the non-residential spaces can not be assessed with the Greenstar hand calculator.	
Question	Percentage Achieved?	
Office	0 %	
Other building	0 %	
1.5 Daylight Access - Minimal Internal Bedrooms		100%
Score Contribution	This credit contributes 5.2% towards the category score.	
Criteria	Do at least 90% of dwellings have an external window in all bedrooms?	
Question	Criteria Achieved ?	
Apartment	Yes	
2.1 Effective Natural Ventilation		100%
Score Contribution	This credit contributes 15.7% towards the category score.	
Criteria	What % of dwellings are effectively naturally ventilated?	
Annotation	All apartments pass with a breeze path of less than 15m between openings of different orientations OR adjacent openings.	
Question	Percentage Achieved?	
Apartment	100 %	
2.3 Ventilation - Non-Residential		66% <span>✓ Achieved</span>
Score Contribution	This credit contributes 13.2% towards the category score.	
Criteria	What % of the regular use areas are effectively naturally ventilated?	
Question	Percentage Achieved?	
Office	0 %	
Other building	0 %	
Criteria	What increase in outdoor air is available to regular use areas compared to the minimum required by AS 1668.2:2012?	
Question	What increase in outdoor air is available to regular use areas compared to the minimum required by AS 1668:2012?	
Office	50 %	
Other building	50 %

Date: 20/02/2024

Criteria	What CO2 concentrations are the ventilation systems designed to achieve, to monitor and to maintain?
Question	Value
Office	800 ppm
Other building	800 ppm
<b>3.4 Thermal comfort - Shading - Non-residential</b> 0%	
Score Contribution	This credit contributes 6.6% towards the category score.
Criteria	What percentage of east, north and west glazing to regular use areas is effectively shaded?
Question	Percentage Achieved?
Office	0 %
Other building	0 %
<b>3.5 Thermal Comfort - Ceiling Fans - Non-Residential</b> 0%	
Score Contribution	This credit contributes 2.2% towards the category score.
Criteria	What percentage of regular use areas in tenancies have ceiling fans?
Question	Percentage Achieved?
Office	0 %
Other building	0 %
<b>4.1 Air Quality - Non-Residential</b> 100%	
Score Contribution	This credit contributes 7.4% towards the category score.
Criteria	Do all paints, sealants and adhesives meet the maximum total indoor pollutant emission limits?
Question	Criteria Achieved ?
Project	Yes
Criteria	Does all carpet meet the maximum total indoor pollutant emission limits?
Question	Criteria Achieved ?
Project	Yes
Criteria	Does all engineered wood meet the maximum total indoor pollutant emission limits?
Question	Criteria Achieved ?
Project	Yes

2.1 Electric Vehicle Infrastructure		100%
Score Contribution	This credit contributes 23.0% towards the category score.	
Criteria	Are facilities provided for the charging of electric vehicles?	
Annotation	6 x EV charging facilities proposed	
Question	Criteria Achieved ?	
Project	Yes	
2.2 Car Share Scheme		0%
Score Contribution	This credit contributes 11.5% towards the category score.	
Criteria	Has a formal car sharing scheme been integrated into the development?	
Question	Criteria Achieved ?	
Project	No	
2.3 Motorbikes / Mopeds		0%
Score Contribution	This credit contributes 11.5% towards the category score.	
Criteria	Are a minimum of 5% of vehicle parking spaces designed and labelled for motorbikes (must be at least 5 motorbike spaces)?	
Question	Criteria Achieved ?	
Project	No	

Waste Overall contribution 2%

CITY OF PORT PHILLIP  
PORT PHILLIP PLANNING SCHEME

1.1 - Construction Waste - Building Re-Use		0%
Score Contribution	This credit contributes 33.3% towards the category score.	
Criteria	If the development is on a site that has been previously developed, has at least 30% of the existing building been re-used?	
Question	Criteria Achieved ?	
Project	No	
2.1 - Operational Waste - Food & Garden Waste		0%
Score Contribution	This credit contributes 33.3% towards the category score.	
Criteria	Are facilities provided for on-site management of food and garden waste?	
Question	Criteria Achieved ?	
Project	No	
2.2 - Operational Waste - Convenience of Recycling		100%
Score Contribution	This credit contributes 33.3% towards the category score.	
Criteria	Are the recycling facilities at least as convenient for occupants as facilities for general waste?	
Question	Criteria Achieved ?	
Project	Yes	

Urban Ecology Overall contribution 1%

1.1 Communal Spaces		81%
Score Contribution	This credit contributes 11.5% towards the category score.	
Criteria	Is there at least the following amount of common space measured in square meters : * 1m² for each of the first 50 occupants * Additional 0.5m² for each occupant between 51 and 250 * Additional 0.25m² for each occupant above 251?	
Annotation	Office are has approx. 85 sqm outrood common area, apartments has approx. 166 sqm common area on the 1st floor with gym,pool etc.	
Question	Common space provided	
Apartment	166 m²	
Office	85.0 m²	
Other building	-	
Output	Minimum Common Space Required	
Apartment	80 m²	
Office	61 m²	
Other building	64 m²	
2.1 Vegetation		0%
Score Contribution	This credit contributes 49.0% towards the category score.	
Criteria	How much of the site is covered with vegetation, expressed as a percentage of the total site area?	
Question	Percentage Achieved ?	
Project	-	
2.2 Green Roofs		100%
Score Contribution	This credit contributes 50.0% towards the category score.	
Criteria	Does the development incorporate a green roof?	
Question	Criteria Achieved ?	
Project	Yes	
2.3 Green Walls and Facades		0%
Score Contribution	This credit contributes 11.5% towards the category score.	
Criteria	Does the development incorporate a green wall or green façade?	
Question	Criteria Achieved ?	
Project	No	
2.4 Private Open Space - Balcony / Courtyard Ecology		0%
Score Contribution	This credit contributes 8.1% towards the category score.	
Criteria	Is there a tap and floor waste on every balcony / in every courtyard?	
Question	Criteria Achieved ?	
Apartment	No

## Appendix 2 - Preliminary Energy Ratings (10<sup>th</sup> to 24<sup>th</sup> floor apartment units)

The FirstRate5 preview energy rating for the apartment units incorporate the full list of assumptions as listed below. Note, additional glazing or shading specifications can be incorporated to improve these ratings.

Thermal Group	Dwelling Modelled	No. of similar/better performing dwellings	Heating Load (MJ/m <sup>2</sup> )	Cooling Load (MJ/m <sup>2</sup> )	Star Rating
<b>Type 1</b>	A3	16	61.3	24.4	6.9
<b>Type 2</b>	B1	4	72.8	29.9	6.4
<b>Type 3</b>	C1	11	56.4	22.3	7.1
<b>Type 4</b>	C2	7	76.1	29.9	6.3
<b>Type 5</b>	D2	5	61.9	27.8	6.8
<b>Type 6</b>	D3	1	81.5	27.1	6.2
			6.7 stars-weighted average		

Full list of assumptions:

- Offset from north point '-6.8 degrees'
- Heating and cooling choices when optional - All rooms except as indicated.
- Floor type - suspended slab to all floors
- Floor coverings – carpet to bedrooms, timber to living areas, tiles to wet areas
- Floor insulation – R2.0 under floor above unconditioned areas.
- Ceiling insulation – R6.0 + 1 reflective foil insulation where there is a roof above a unit
- Balcony tile colour - light
- Wall colour – medium
- Wall height to ceiling – Measured floor to ceiling above or confirm if different per plans
- Exterior Walls – Fibre cement with R2.7 internal insulation and 10mm plasterboard over. External cladding where designed.
- Interior walls – R2.0 insulation between condition and unconditioned spaces, R2.0 insulation between party walls
- Windows
  - All window heights as shown in full on elevations
  - Window widths all as per plans
  - Glazing type: With hinge=Aluminium thermally broken frame, double-glazed argon-filled gap, low solar gain, low-E, clear (U-value = 3.0, SHGC=0.27)
  - Glazing type: Without hinge=Aluminium thermally broken frame, double-glazed argon-filled gap, low solar gain, low-E, clear (U-value = 3.0, SHGC=0.26)
  - All windows and doors weather stripped

- Exhaust fans, all sealed –
  - All bathrooms and ensuites: 300mm
  - Kitchen: 180mm
- Ceiling fans – none
- Eaves – included where appropriate
- Wing walls – included where appropriate
- Fences – included where appropriate
- Lights – no unsealed downlights. Max 4W/m2 density. If downlights are installed they will be IC rated downlights with insulation installed over downlight as per manufacturer's recommendations.

## Appendix 3 - NCC Alternate 2019 Wall-Glazing calculator (GF-Restaurant, 1F- Offices and 2F to 9F- Hotel)

Section J Deemed-to-Satisfy is proposed and the Wall-Glazing Calculator tool below was used to evaluate the walls and glazing properties for the current design for ground level restaurant (class 6) office (Class 5) and hotel (Class 3). To achieve deemed to satisfy compliance:

### Ground Level Restaurant (Class 6)

- The walls will need a minimum R value of 1.4 (maximum u-value of 0.71), Any wall system with the R value of R1.4 or higher will comply
- The windows (including the frames) will need a maximum u-value of 7, Any windows with the U value of 7 or lower will comply
- The maximum solar heat gain coefficient (SHGC) needed on proposed glass is 0.15, Any glazing with SHGC of 0.15 or lower will comply

### CITY OF PORT PHILLIP PORT PHILLIP PLANNING SCHEME

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A

83 pages  
Date: 20/02/2024

### First level office area (Class 5)

- The walls will need a minimum R value of 1.4 (maximum u-value of 0.71), Any wall system with the R value of R1.4 or higher will comply
- The windows (including the frames) will need a maximum u-value of 5.5, Any windows with the U value of 5.5 or lower will comply
- The maximum solar heat gain coefficient (SHGC) needed on proposed glass is 0.2, Any glazing with SHGC of 0.2 or lower will comply

### CITY OF PORT PHILLIP PORT PHILLIP PLANNING SCHEME

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

## 2<sup>nd</sup> to 5<sup>th</sup> level Hotel (Class 3)

- The walls will need a minimum R value of 2.8 (maximum u-value of 0.35), Any wall system with the R value of R2.8 or higher will comply
- The windows (including the frames) will need a maximum u-value of 1.9, Any windows with the U value of 1.9 or lower will comply
- The maximum solar heat gain coefficient (SHGC) needed on proposed glass is 0.09, Any glazing with SHGC of 0.09 or lower will comply

### CITY OF PORT PHILLIP PORT PHILLIP PLANNING SCHEME

This endorsed document complies with Condition No. 25 in  
Planning Permit No: 1051/2017/A  
83 pages  
Date: 20/02/2024

### 6th to 9th level Hotel (Class 3)

- The walls will need a minimum R value of 2.8 (maximum u-value of 0.35), Any wall system with the R value of R2.8 or higher will comply
- The windows (including the frames) will need a maximum u-value of 1.6, Any windows with the U value of 1.6 or lower will comply
- The maximum solar heat gain coefficient (SHGC) needed on proposed glass is 0.09, Any glazing with SHGC of 0.09 or lower will comply
